

## Guidance for Eculizumab Patient Transition

The following is to support the clinical teams in the transition of their existing Eculizumab patients from their current provider to HealthNet Homecare. There are a number of critical steps that need to be addressed as part of this process to ensure the safe transition of patients and continued time-critical treatment as per their prescribed regime.

- Once a decision has been made to transition patients to HealthNet Homecare it is important that we receive a signed Product Service Specification (PSS) document for your preferred treatment. At this point, we will ensure that you are in receipt of the prescription and patient registration templates, to be completed for each patient, as appropriate, and returned to HealthNet once you have an indication of the date for the first infusion to be performed by HealthNet.
- It is important that you provide HealthNet with:
  - The date of the last infusion to be administered by the current homecare provider
  - The date of first hospital infusion – where relevant
  - The date of the first infusion to be completed by HealthNet
  - Infusion schedule i.e. interval between treatments and prescribed dose

Patients being transitioned to Bekemv will receive their first infusion in hospital. Patients being transitioned to Epysqli may receive their first dose administered in hospital or at home, this is the decision of the clinical team.

This information should be captured in the exit data from your current provider or on the registration form if this is the preferred documentation for transition of patients to HealthNet.

- Exit data - Prior to sending any patient documentation to HealthNet, your homecare pharmacist will need to request from your incumbent homecare provider the patient exit data, this will provide all the details regarding each patient currently receiving homecare for Eculizumab. This exit data will need to be validated by the homecare and clinical teams prior to sending to HealthNet. We recommend requesting your exit data as soon as you have decided to move your patients to HealthNet, this will enable HealthNet to plan for your patients' transitions.
- Upon receipt of the 'exit data' we will register your patients on the HealthNet system, no registration form is required unless your preference is to use registration forms. At this stage we will send to the patient:
  - A transition letter from NRCTC, if this has been requested by the hospital
  - The HealthNet Welcome Pack providing information about HealthNet including contact details
  - The NHS leaflet and the SPS Eculizumab biosimilar patient information leaflet
- Upon receipt of the 'exit data,' and where required, we can pre-populate the new prescription with the patient and hospital details - if you are not providing exit data, we will require you to populate the new patient prescription.

- Essential information that needs to be provided to HealthNet for each patient:
  - When submitting your patient exit data, please send a copy of the certificate of vaccination for each patient.
  - Certificate of Vaccination:
    - Please send with the homecare prescription (Bekemv and Epysqli)
    - Epysqli will be ordered directly from HealthNet for hospital infusions, the certificate of vaccination for each patient for whom product is being ordered will also need to be sent with the wholesale order form
  - Patient postcode to allow planning of deliveries and nurse visits, this should be on the exit data
  - Patient name, this should be on exit data
  - Contact details, this should be on exit data
  - Age of patient, this should be on exit data as DOB
  - Venous access e.g. does the patient have a central venous line
  - Last infusion date with current treatment and required date for first infusion in the hospital, and first infusion with HealthNet.
  - You may choose to administer the first infusion of your chosen biosimilar within the hospital, therefore please ensure that the date we are required to administer the first infusion at home is provided on the prescription form.
- Upon enrolment on the HealthNet system, the patient will be contacted by the HealthNet clinical team to confirm date of their first home infusion / nurse visit

Throughout the transition process you will be supported by your local HealthNet Business Development Manager, who will ensure that all the relevant information required is obtained to facilitate a successful transition.
