

Amgen offer a process that allows a transplanting centre to purchase the first two doses of BEKEMV® ▼ (eculizumab) on a named renal transplant patient basis in advance of the drug being required.

If your trust has a patient pending or post activation for renal transplant and you need to order BEKEMV® to have stock available for this patient please follow steps below:

1

Contact your Amgen representative to request BEKEMV® for a patient pending or post activation for renal transplant: hayleyw@amgen.com
Request the contract and provide name, title and e-mail address of signatory

2

Amgen will provide a contract that will detail the process for obtaining available stock for a renal transplant patient. This is to be signed by both the trust and Amgen via DocuSign

3

Trust to sign (this will then automatically return to Amgen post signature)

4

Following Amgen signature, a fully executed document will be returned to the trust

5

Once the contract is completed, BEKEMV® is ordered by the trust as per standard process (found in Appendix 1 of the completed contract).

6

This process is repeated for any patient that is pending imminent activation or becomes activated for renal transplant
